

CommitPass

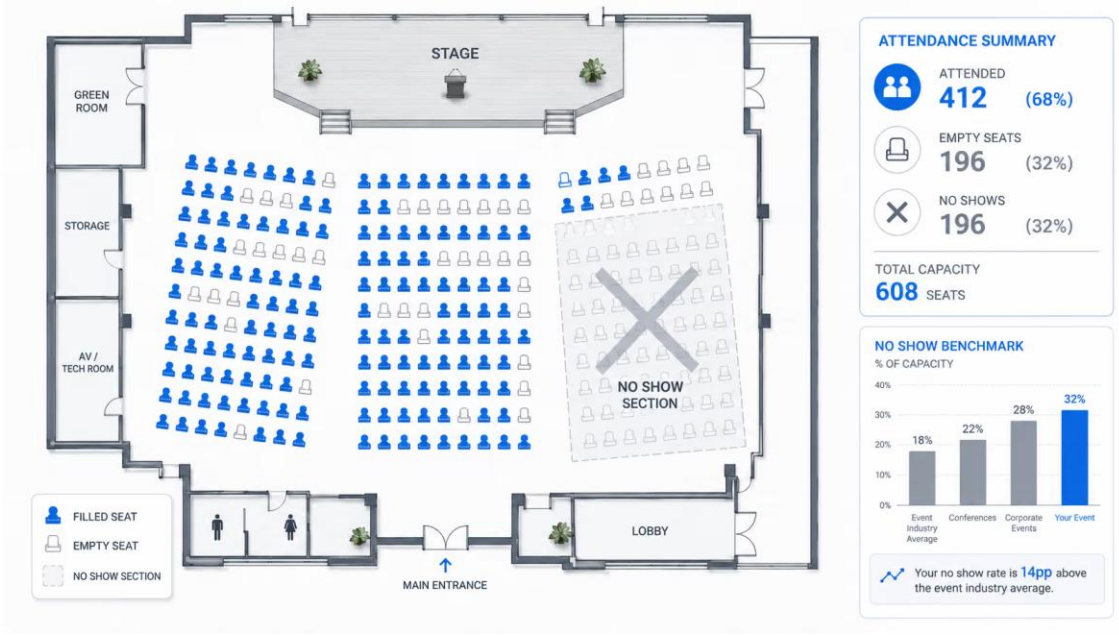

An RSVP leaves attendance uncertain

Registration records interest

Guests can reserve a limited seat
without a clear commitment to attend.

Empty seats waste preparation

Hosts prepare space and materials.
Other interested guests lose a place.

Venue illustration: KNVI Labs

The no-show problem is bigger

Free in-person events

40–60%

reported no-show range

How can we turn a reservation into a real commitment?

Source: KNVI Labs

CommitPass

Onchain commitments for events

Reserve with USDC.
Show up. Claim after settlement.

For workshops and community meetups
with limited capacity.

Source: KNVI Labs. Normal settlement: attendees claim; no-shows forfeit.

A refundable reason to show up

$3–$25

refundable
deposit

14–25%

reported
no-show range

A small deposit gives people a reason to follow through.

Why Monad

Deposits and payouts guests can trace

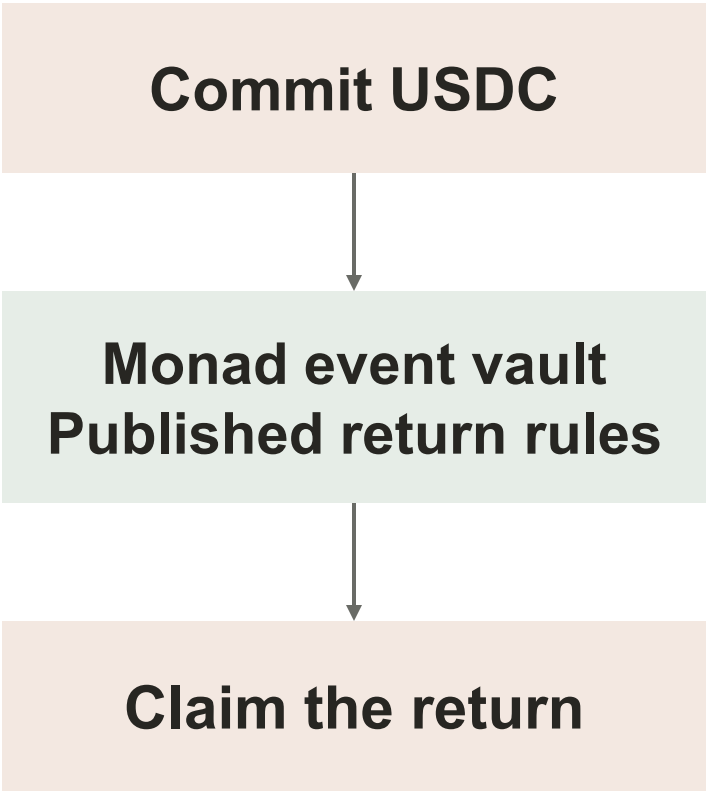

Every commitment and completed claim
has an onchain record.

Contracts apply the return rules

Recorded attendance determines
each guest's allocation.

A practical chain for small deposits

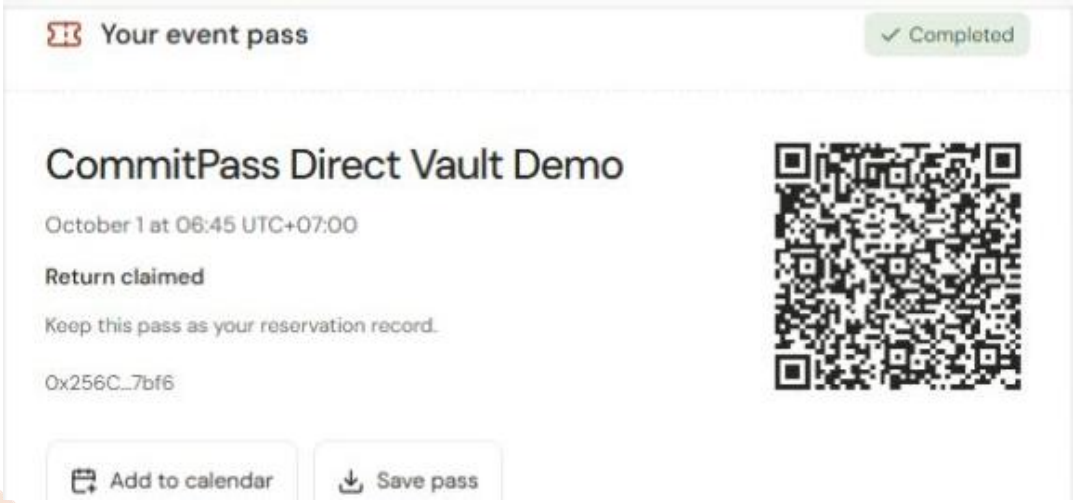

Fast, low-cost transactions with familiar EVM tools.

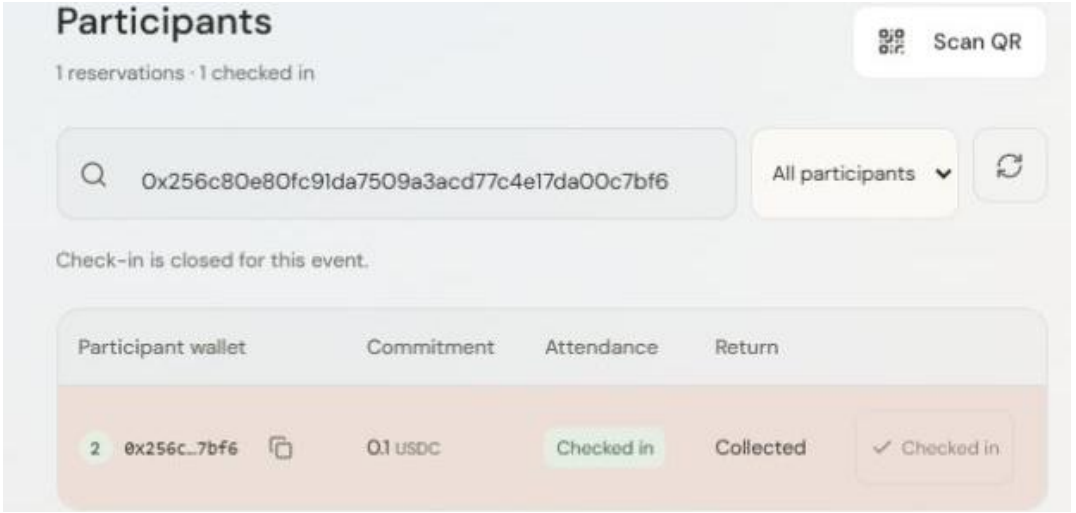

How CommitPass works

Create → Commit USDC → Start → QR check-in → Settle → Claim

Guest reservation pass

Host participant management

The organizer records attendance. Settlement fixes allocations. Each guest signs a claim.

Commitments at work

While you’re at the event,
your money can earn yield.

Morpho: Hyperithm USDC Apex

Integration path tested through Tenderly simulation by the builder.

Public demo: MockYieldVault on Monad testnet. Yield depends on recovered funds.

Rewards for attendance

Two guests commit 5 USDC each. One attends.

Party	Attendance	Allocation
Guest A	Attends	**7.5 USDC + Y**
Guest B	No-show	**0 USDC**
CommitPass	Protocol share	**2.5 USDC**

5 USDC principal + 2.5 USDC no-show share + recovered yield

Y = any recovered yield. Example assumes normal settlement with one attendee and successful redemption.

Host cancellation and zero-attendance events follow separate refund rules.

Business model

Current protocol mechanism

50%

of forfeited no-show principal goes to CommitPass

Planned recurring revenue

Organizer tools for repeat events

Attendance analytics across events. Pricing and willingness to pay will be tested in pilots.

Roadmap

Now

Working testnet demo

Reservation, QR check-in, settlement and claim

Next

Community pilots

3–5 organizers
5–10 pilot events

Later

Production readiness

Security review, real yield integration and paid tools

First hosts: direct outreach to community workshop organizers, with help running their first event.

Pilot counts are planning targets. Measure attendance, repeat hosting and willingness to pay.
